## 1 DIRECT TESTIMONY OF

2 ROGER SHERMAN

## 3 STATEMENT OF QUALIFICATIONS

4

5 My Name is Roger Sherman. I am Brown-Forman Professor of

6 Economics at the University of Virginia. I was awarded the

7 M.B.A. degree by Harvard University and the M.S. and Ph.D.

8 degrees by Carnegie-Mellon University. I have been at the

9 University of Virginia since 1965 and served as Economics

10 Department chair from 1982 to 1990. I have published five

11 books, including an edited volume on postal issues, and over

12 80 articles, including 10 that can be related to postal

13 matters. I currently serve on the editorial boards of two

14 academic journals, including the Journal of Regulatory

15 Economics. In the past I have served as consultant to the

16 U.S. Postal Service and the Postal Rate Commission. My

17 curriculum vitae is attached.

## 1 I. PURPOSE OF TESTIMONY

2

3 The purpose of my testimony is to discuss pricing and  
4 classification principles used by the Postal Service in Docket  
5 No. MC96-3. Attention will be given to the market power of  
6 the Postal Service and to evidence of competitive pressure,  
7 and how such elements affect optimal pricing according to  
8 accepted principles. Cost information is the crucial basis  
9 for pricing in any circumstance, and the use of cost  
10 information will be considered.

11

1 II. THE PIECE-MEAL APPROACH AND THE MARKETPLACE

2

3 The Postal Service proposal in Docket No. MC96-3 has  
4 features that are unusual. First, it focuses on only a few  
5 special services, rather than on all services. Second, it  
6 gives attention to something called marketplace  
7 considerations, and gives less than expected attention to  
8 costs. Observations will be made about these features of the  
9 case, and then the proposals will be taken up in turn.

10 This is an unusual proposal for making price increases on  
11 a piece-meal basis rather than in context, as in an omnibus  
12 rate case, where all rates for all services can be compared.  
13 In setting out goals of the proposal, Witness Lyons (USPS-T-1)  
14 says the first goal is to place services "on a more  
15 economically rational, businesslike basis." (page 2) In  
16 trying to give content to that vague statement he says the  
17 proposals are designed "to reflect marketplace considerations,  
18 as well as the costs of providing services." (page 2) He adds  
19 that "Specific pricing reform objectives include more market-  
20 based prices, more equitable contributions from the services  
21 to institutional costs, and the realignment and streamlining  
22 of certain special services offerings to make them more  
23 commercially attractive." These may be nice-sounding  
24 statements but they are still vague. It is not at all clear  
25 what market-based prices are. They are not defined well

1 enough to be related to principles of optimal pricing. To  
2 pursue equitable contributions to institutional costs calls  
3 for an omnibus rate case, where comparisons across services  
4 are possible. That goal is practically impossible to pursue  
5 when only piece-meal proposals are made. And the recommended  
6 realignment and streamlining sometimes seems aimed more at  
7 raising revenue than at making offerings more commercially  
8 attractive.

9       The second goal Mr. Lyons cites (USPS-T-1) is to make  
10 improvements in services so "they are more useful to the  
11 customer." (page 2) The only concrete example he gives is the  
12 special fee that is proposed for postal cards, which will  
13 raise the price by 2 cents per card; this would not seem to  
14 make the postal card any more useful to customers. Another  
15 improvement noted along this line is reducing the number of  
16 fees for certain services. Of course the number of fees is  
17 reduced by eliminating choices for consumers, which would  
18 usually make a service less rather than more useful.  
19 Eliminating a service is cited as another such improvement.  
20 While eliminating a service may make good profit and loss  
21 sense, it can hardly make the service more useful. The third  
22 goal cited is to improve contributions, consistent with  
23 overall financial policy objectives (USPS-T-1, page 3). This  
24 goal seems to be served by practically every proposal that is  
25 made.

1           The influence of the marketplace is described generally  
2 in the testimony of Witness Steidtmann (USPS-T-2), who  
3 rationalizes the Postal Service proposals as fitting a  
4 retailer's procedures and point of view. In defense of the  
5 piece-meal approach of selective pricing, he says that  
6 "retailers will tend to adjust prices selectively," and "it  
7 allows for greater analysis of those products that would most  
8 benefit from adjustment." (page 1) Selections of services to  
9 consider apparently were not made on that ground, however.  
10 Money order and C.O.D. services currently appear to be priced  
11 below their attributable costs, so they obviously are most in  
12 need of adjustment, but they are not among the services being  
13 adjusted. In any case, a retailer's way of looking at  
14 revisions to services and prices would not ordinarily include  
15 welfare considerations and so is not what is expected from the  
16 Postal Service.

17          Witness Steidtmann's review of the proposals repeatedly  
18 finds them consistent with sound retailing practice. In the  
19 case of certified mail/return receipt service, for example, he  
20 notes the certified mail price is to be increased and the  
21 choice of return receipt service without address information  
22 is to be eliminated. About eliminating the return receipt  
23 choice he says that "it is sound retailing practice to  
24 simplify a product offering." (page 5) About the price  
25 increase in certified mail he says: "This increase in  
26 certified mail price reflects the fact that comparable service

1 is currently offered at much higher prices. The certified  
2 mail fee increases thus comports with retail industry  
3 practices." (pages 5-6) Having alternative services available  
4 only at higher prices means the Postal Service has market  
5 power. The point has been made often: "...monopoly power is  
6 present when a firm is sufficiently insulated from competitive  
7 pressures to be able to raise prices...without concern for its  
8 competitors' actions because its rivals cannot offer customers  
9 reasonable alternatives."<sup>1</sup> That such monopoly power would be  
10 exploited by a retailer is unsurprising. The fact that a  
11 retailer would exploit monopoly advantage is also irrelevant  
12 as far as pricing the services of the Postal Service is  
13 concerned.

14 Marketplace considerations alone seem often to leave  
15 great latitude for Postal Service prices. If alternative  
16 services can be offered at prices not far from those of the  
17 Postal Service, however, that emphasizes the importance of  
18 cost information. Indeed, cost information is really more  
19 important than competitive price information. For even when  
20 informed about competitive prices, a provider of services must  
21 know its own costs in order to judge where its services can  
22 offer consumers the greatest advantage relative to  
23 competitors. This is clearly true if technologies differ, so

---

<sup>1</sup> From F.M. Fisher, J.J. McGowan, and J.E. Greenwood, Folded, Spindled, and Mutilated: Economic Analysis of U.S. vs. IBM, Cambridge, Mass.: MIT Press, 1983, p. 99.

1 costs of different service features differ among providers,  
2 because then advantage should be taken of one's own technology  
3 to lower prices where costs are lower. That is how consumers  
4 can benefit from the different technologies. If technologies  
5 are similar and costs are similar among producers, information  
6 about costs is still crucial. Then the provider who is better  
7 informed about costs, and who prices based on costs, will win  
8 the business where it has lower costs, leaving the less  
9 profitable business for a less informed competitor. Cost  
10 information in the Postal Service proposal is very limited,  
11 however. There is often little cost information for detailed  
12 offerings within broad service categories, making analysis of  
13 specific pricing proposals impossible.

14 Of course cost information also is crucially important  
15 for pricing in the absence of close competitors offering  
16 alternative services. Optimal pricing theories often stress  
17 relative prices—how prices relate to one another—or relative  
18 contribution margins as in the case of Ramsey prices. And to  
19 see the pattern of such relative price relationships it is  
20 desirable to consider all prices at once, as in an omnibus  
21 rate case. In addition, a price change in one service can  
22 alter quantities of other services, through cross-price-  
23 elasticity effects. This interrelationship among services  
24 also makes it desirable to consider entire sets of prices  
25 rather than to take them up in a piece-meal way, since in the  
26 piece-meal approach it is difficult to deal with effects on

1 services that are not under consideration. Thus, to take  
2 account of optimal pricing ideas and to reflect effects across  
3 services, omnibus rate cases have great advantages.

4 It is still possible to consider effectively only a  
5 subset of services, if added care is given to the subset and  
6 effects of relations to other prices and services are  
7 included. Only limited attention is given to such effects by  
8 the Postal Service. For instance, in pricing post office  
9 boxes no attention is given to possible delivery-cost savings  
10 in the major mail classes due to post office box use. The  
11 Commission has rejected this so called "cost avoidance" effect  
12 in pricing post office boxes before (R77-1; R84-1; R87-1), but  
13 it always had to do so for lack of sound information on what  
14 the consequent delivery cost savings might be. This would be  
15 an appropriate time to deal feasibly with the question. When  
16 the subject came up in prior cases the Commission was  
17 confronted with fairly extreme proposals to be accepted or  
18 rejected, whereas here a reasoned analysis might have been  
19 provided as an influence on post office box pricing.

20 If socially optimal pricing is a goal, some reference to  
21 the relation between costs and prices across services is  
22 needed. Otherwise one subclass, or a small group of  
23 subclasses, could be out of line with others regarding  
24 contribution made to institutional costs, yet this would not  
25 be known. To pursue socially optimal prices, a piece-meal  
26 approach has to include an explicit plan for future proposals,

1 so the intended pattern of price-cost relationships in effect  
2 over time can be seen. Only then would it be possible to  
3 estimate in an overall way which consumers benefit or which  
4 bear added burdens under a proposal. The Postal Service  
5 offers no such plan. Even though it would not be binding,  
6 such a plan would still allow comparisons of effects across  
7 services.

8 One goal of the Postal Service's proposal is to raise  
9 greater revenue and increase the contribution to institutional  
10 costs. It stands to reason that increased prices for only  
11 some services will distort overall Ramsey price relationships  
12 or any other form of relative relationship from whatever  
13 existed before, unless attention is focused on services where  
14 price-cost relationships have fallen out of line. But  
15 attention clearly is not focused in that way, since two money-  
16 losing special services, C.O.D. and money orders, are not  
17 given any attention. By failing to cover their attributable  
18 costs these two services fail to satisfy virtually any  
19 guideline for optimal pricing. By failing to cover their  
20 attributable costs they also are not in compliance with the  
21 law, in the form of pricing requirements of the Act  
22 (§ 3622(b)). In any consideration of increases in special  
23 services prices they would therefore seem to deserve the  
24 highest priority.

25 Thus, the new features of this case do not appear to  
26 bring real advantages. The goals stated for them are vague

1 and not always descriptive of what is actually proposed.  
2 Sound cost information is crucial, as always, but seems not to  
3 have been given great attention relative to information on  
4 alternative supplier's offerings. Where they are provided,  
5 these marketplace considerations indicate mainly that few  
6 alternatives are available at reasonable prices for Postal  
7 Service customers. Such evidence of market power indicates  
8 that optimal pricing principles are still important. But they  
9 are not emphasized and are not easy to apply because only a  
10 few services are under consideration.

11

## 1    III. SPECIFIC POSTAL SERVICE PROPOSALS

2            In turning to examine specific proposals for individual  
3 services, we shall begin with proposals that are easy to judge  
4 favorably, such as the proposal to eliminate special delivery  
5 service. Its role is now being served by faster means of  
6 expedited delivery and it can barely cover its attributable  
7 cost, so it is reasonable to eliminate it. Raising indemnity  
8 limits for insurance service is a desirable expansion of  
9 offerings and should be adopted. No longer charging for  
10 registry service based on declared value above \$100 when it is  
11 uninsured—that is, when cost probably does not depend on  
12 value—may be a step that should have been taken long ago. It  
13 would be very simple to decide the question if cost  
14 information were available, but lack of cost information is  
15 serious. Adequate cost information is also lacking for  
16 certified mail service, where a simple price increase is  
17 proposed. Elimination of return receipt service that does not  
18 include address information, which is shown to be preferred by  
19 nine-tenths of users, seems misguided. Why force consumers to  
20 choose the address service when they show so clearly by their  
21 choices that they do not want it? Finally, proposals for post  
22 office box and caller service prices in relation to estimated  
23 costs seem crudely jumbled, and it is difficult to see how the  
24 proposal can be acceptable when it is so lacking in  
25 consistency.

## 1 A. Special Delivery

2 The introduction of alternative expedited mail services  
3 has narrowed the role available for special delivery and  
4 threatened its usefulness. For example, Postal Service  
5 Express Mail service does two things: (1) it speeds movement  
6 of the mail to the destination post office and (2) it then  
7 accomplishes expedited delivery. By offering faster movement  
8 to destination in addition to expedited delivery, Express Mail  
9 dominates special delivery service. It might be desirable to  
10 separate these two features of speed in movement to  
11 destination post office and speed in delivery, so users could  
12 choose only the latter when they wish. This might be  
13 preferred when seeking faster delivery within the same city,  
14 for example, where speed of movement to a distant post office  
15 is not needed. But apparently because of competition from  
16 courier services, the Postal Service is unable to offer that  
17 service at a price much above attributable costs. The Postal  
18 Service now proposes to eliminate special delivery service.  
19 Based on the declining usage of special delivery and its  
20 inability to contribute above its attributable costs, this  
21 might be a wise course.

22

## 23 B. Insured Mail

24 Insured mail is the only service for which a genuine  
25 improvement is proposed. Higher indemnity levels are to be

1 offered for domestic insured mail, which now has a limit of  
2 \$600, and for Express Mail, which now has a limit of \$500.  
3 Both limits are to be raised to \$5,000. Charges for these  
4 greater indemnity levels will be made based on value, in \$100  
5 increments. The current insured mail fee is \$0.75 for values  
6 up to \$50, \$1.60 for values from \$50.01 to \$100, and an added  
7 \$0.90 per \$100 in value up to \$600. The proposal will simply  
8 continue that fee of \$0.90 per \$100 of value past \$600 up to  
9 \$5000. For Express Mail, an indemnity level up to \$500 is  
10 currently included in the service and will continue to be  
11 included without additional fee. Should greater insurance be  
12 desired it will be offered under the proposal at \$0.90 per  
13 \$100 up to \$5,000.

14 Some evidence is provided by the Postal Service  
15 indicating that users of insured mailing services want higher  
16 indemnity levels and would rely more on Postal Service  
17 services if they could obtain it. A survey of customers shows  
18 that significant usage of the greater indemnity levels is  
19 likely (USPS-LR-SSR-109, cited by Witness Needham, USPS-T-8,  
20 page 8). Thus, there appears to be sufficient interest to  
21 warrant offering the higher indemnity levels, and to try to  
22 see what effect it might have on usage by the mailers of  
23 valuable items. One drawback of the proposal is that it is  
24 difficult to identify costs for the new levels of insurance  
25 service.

1        Since this increase in indemnity limit would essentially  
2        be a new Postal Service offering, provision should be made to  
3        gather cost information as a basis for later adjustment of  
4        these fees, should that be appropriate. And a procedural  
5        change may be warranted—as described by Postal Service  
6        Witness Needham (USPS-T-8, pages 28-29)—to reduce the  
7        probability of claims at higher indemnity levels for insured  
8        mail. The change should make the exposure of insured mail and  
9        Express Mail comparable and therefore help to support equal  
10       insurance charges.

11       The Postal Service also proposes to make an insurance  
12       service offering less attractive. It proposes to lower the  
13       indemnity limit for document reconstruction from the current  
14       levels of \$50,000 per piece and \$500,000 per occurrence down  
15       to 1/100th of these amounts, to \$500 per piece and \$5,000 per  
16       occurrence. Although it is a very substantial reduction in  
17       what has been offered, the \$50,000 limit per piece is probably  
18       inappropriate at the present time, and the new offering seems  
19       adequate.

20

21       C.    Registered Mail

22       Registered mail offers high security and accountability  
23       that is appropriate for the care of valuable items. Currently  
24       the price for registered mail depends on its declared value,  
25       starting with value categories \$0.00 to \$100, \$100.01 to \$500,

1 \$500.01 to \$1,000, and rising thereafter in \$1,000 increments  
2 to \$15,000,000. Two options, with different prices, are now  
3 available for every value category, one with insurance and one  
4 without insurance. Without insurance the lowest value  
5 category is charged \$4.85 and for each rising declared value  
6 category thereafter the price rises by \$0.35. With insurance  
7 the lowest value category is charged \$4.95 and for each rising  
8 category thereafter the price rises by \$0.45. (For example,  
9 under this fee structure an item with a declared value of  
10 \$1,000,000 will be priced at \$355.20 without insurance and  
11 \$455.40 with insurance.)

12 The proposed rate structure eliminates the option of  
13 sending an item by registered mail without insurance if its  
14 declared value exceeds \$100. An item in the first value  
15 category of \$0.00 to \$100 can be sent without insurance, but  
16 no item with a higher declared value can be sent without  
17 insurance. The rates for insured registry mail will remain  
18 unchanged, and are to continue as described above.

19 The question this proposal raises about the current rates  
20 is: For mail that had no insurance, why were such significant  
21 distinctions made in price in the current rates, based on  
22 declared value? It would seem that, without insurance,  
23 declared value would not greatly affect handling cost, and  
24 thus should not greatly affect rates. David Popkin argued in  
25 R94-1 (Initial Brief dated September 22, 1994) that accepting,  
26 transporting, and delivering a registered item that is not

1 insured costs no more simply because it is more valuable. The  
2 rate structure proposed by the Postal Service, which  
3 essentially offers no rate distinction for uninsured items by  
4 declared value, is consistent with his argument. Any major  
5 cost difference that is based on value would seem to turn on  
6 the insurance cost, which presumably does depend on value.  
7 The Commission endorsed exploration of this question that  
8 Popkin raised in R94-1, but lacked a record on which to  
9 consider it at that time. It is possible the logic of Mr.  
10 Popkin's argument would be supported with postal cost  
11 information by value category, which could then justify the  
12 proposed rate structure. But costs for insured or uninsured  
13 registry items by declared value are not provided, so although  
14 the proposal is appealing no basis is provided for evaluating  
15 it.

16       There is some survey information from Postal Service  
17 customers showing positive interest in the proposal (Witness  
18 Needham, USPS-T-8, pages 6-15, and USPS-LR-SSR-108). Indirect  
19 support for the proposed fee schedule comes from the pattern  
20 of usage, which shows that 88 percent of registry mail without  
21 insurance has declared value of \$100 or less and only 12  
22 percent has declared value above \$100. It might be surprising  
23 to find even 12 percent of the mailers of uninsured mail  
24 declaring a value higher than \$100—doing so only entitles  
25 them to pay a higher fee. After all, the existing fee  
26 structure looks like a form of "value of service" pricing.

1 The November 1993 survey of high claim filers and mailers of  
2 high value items shows that most do not object to eliminating  
3 the no-insurance option above \$100 and those who do are not  
4 heavy users of uninsured registry mail.

5 The Postal Service projects that enough current users of  
6 uninsured registry mail valued above \$100 will switch to  
7 insured so revenue per transaction will increase under the  
8 proposal (USPS-5G, 5J. But see USPS-T-1, WP-E, page 2, where  
9 revenue per transaction is unchanged.) Since the proposal  
10 eliminates the uninsured option for declared values above  
11 \$100, it is also possible that users of this service will send  
12 items at the \$100 value rate rather than declare a higher  
13 value and pay for unwanted insurance. So there actually could  
14 be a decline in revenue per transaction. But the effect in  
15 any case will not be enormous, since only about 4 percent of  
16 registry business is affected.

17

#### 18 D. Certified Mail

19 Certified mail was created to provide a service somewhat  
20 like registry service, but at lower cost, for the portion of  
21 registry mail that had no monetary value. It has grown  
22 handsomely and continues to be well accepted by consumers.  
23 The Postal Service proposes to raise the fee for certified  
24 mail from \$1.10 to \$1.50. It is difficult to interpret how  
25 the result of this price increase would relate to the overall

1 structure of rates, because costs and revenues are not  
2 consistently presented. The cost report of Witness Patelunas  
3 (USPS-5G, 5J) shows a cost coverage for certified mail at  
4 current rates of 202.2 percent, and a cost coverage under  
5 proposed rates of 271.0 percent. These are very high cost  
6 coverages. Witness Needham reports (USPS-T-8, page 71) that  
7 the Postal Service historically has included return receipt  
8 revenue but not return receipt cost in the cost coverage  
9 calculation for certified mail, but that it is not doing so in  
10 this case. Perhaps Witness Patelunas used the historical  
11 practice, because Witness Needham reports lower cost  
12 coverages, claiming that certified mail cost coverage is only  
13 107 percent under current rates and would be 146 percent under  
14 proposed rates.

15 If there is a longstanding error in the way costs have  
16 been evaluated for pricing certified mail service, that should  
17 be demonstrated and new rates might be proposed based on  
18 correct costs. At present the argument is not put explicitly  
19 and the reason for the increase—cost increases or previously  
20 incorrect costs—is not perfectly clear.

21 Evidence is provided from a survey of perceived certified  
22 mail users, showing that alternative services are much more  
23 costly to use. The average cost of an alternative service was  
24 greater than the cost of Postal Service certified mail by  
25 \$10.68. This difference applies whether return receipt, which  
26 often accompanies certified mail service, was included or not

1 (Witness Needham, USPS-T-8, page 67, and USPS-LR-SSR-110).

2 Once again, this shows the great market power the Postal

3 Service has in the market for certified mail.

4

5 E. Return Receipt

6 Return receipt service gives proof of delivery. It is

7 available for mail matter sent C.O.D., insured at over \$50,

8 registered, certified, or Express Mail. For such mail

9 matter—which requires signature on receipt—even after it is

10 mailed it is possible to request the name of the person who

11 signed for it and the date it was delivered. But generally

12 the return receipt service is requested when the item is

13 mailed. Merchandise sent by First-Class Mail, Priority Mail,

14 and much of Standard Mail also qualifies for the return

15 receipt service, but only if requested at the time such items

16 are mailed. Currently the return receipt service for mail

17 matter after it has been mailed is available for a charge of

18 \$6.60, and no change in that rate is proposed. For mail

19 matter and merchandise there are now two levels of service,

20 one that provides the name of the recipient and the date

21 delivered, and another that provides those two facts plus the

22 address delivered to. For mail matter the first service is

23 available for a fee of \$1.10 and the second for a fee of

24 \$1.50. These same two levels of service are also available

25 for merchandise at fees of \$1.20 and \$1.65.

1       A reclassification is proposed to simplify the service  
2 offerings by eliminating the choice of return receipt with  
3 date and name of recipient only, and requiring that the  
4 address information be chosen as well (the address will be  
5 provided only when it is different from the original address).  
6 The simplification would apply to return receipt use in both  
7 mail matter and merchandise. Eliminating the lower price  
8 option of choosing date and name only would have the effect of  
9 forcing all users to the higher price service level that  
10 includes address information, so it will effectively be a  
11 price increase for those who had selected only date and name  
12 information before. Since roughly 90 percent of the current  
13 volume falls in the date and name category that is being  
14 eliminated, the effect is essentially like a price increase,  
15 and a substantial one. Currently the cost coverage for this  
16 service is reported as 127 percent by Witness Needham and is  
17 estimated to rise to 171 percent under the proposal (USPS-T-8,  
18 page 92).

19       Witness Steidtmann uses the auto industry move to  
20 offering option packages, rather than allowing complete  
21 consumer choice of options, as a suggestive analogy (USPS-T-2,  
22 page 5). In that auto case there was a great reduction in  
23 cost as benefit to the consumer; no such benefit is provided  
24 here in the return receipt case to justify the elimination of  
25 consumer choice. Perhaps it is advantageous to the Postal  
26 Service to have customers use the address service, so that

1 more addresses will be correct and fewer pieces of mail will  
2 have to be forwarded because they were sent to the wrong  
3 address. But if that is true the address service should be  
4 offered at a lower price, not a higher one.

5 If the cost for providing the additional address  
6 information in the present optional return receipt service is  
7 very small, of course, a case might be made for including it  
8 as part of a simpler, single-package return receipt service.  
9 But the cost information that is given (USPS-T-1, WP-D at page  
10 3) indicates an added cost for the address service of \$0.24,  
11 which leads to a \$0.40 price difference with a cost coverage  
12 of 167 percent. This cost difference thus seems sufficient to  
13 warrant the existing \$0.40 price difference, and no argument  
14 is offered to the contrary.

15 It is obvious from their present choices that consumers  
16 want the no-address option, because nine-tenths of them choose  
17 it in preference to the additional, more costly, address  
18 information. The opportunity to have address information  
19 might usefully be preserved as an extra-cost option for  
20 consumers, since some consumers use it, especially recently  
21 with merchandise, but the vast majority of consumers clearly  
22 do not value it enough to pay the fee set for it. The fact  
23 that nine-tenths of consumers now show by their choices that  
24 they do not value the address information as much as they  
25 would be charged for it is compelling evidence against the  
26 proposal to force them to take it. Simplification is to be

1 considered in rate setting, but as the Commission has noted  
2 before, it must be weighed against other effects (see, e.g.,  
3 Recommended Decisions in Docket No. R77-1, page 434, and  
4 Docket No. R80-1, page 583). Simplification is no  
5 justification for forcing the vast majority of consumers to  
6 buy the more expensive address service, which they demonstrate  
7 overwhelmingly that they do not want. The choice of the lower  
8 cost and lower price service their choices show they prefer  
9 should not be taken away from them.

10

## 11 F. Stamped Card

12 The Postal Service proposes to add a \$0.02 fee to the  
13 postal card to pay for its manufacture and for affixing a  
14 stamp to it, to make the full price of the postal card \$0.22.  
15 The rate for the private card is to remain at \$0.20. The  
16 proposal would make the postal card analogous to the stamped  
17 envelope, which requires a \$0.06 charge for the envelope and  
18 for affixing the stamp (although it would depart from the  
19 practice followed in Express Mail and Priority Mail of  
20 providing envelopes, and even boxes, free). Pursuing this  
21 analogy, the postal card would be renamed a stamped card. The  
22 Postal Service estimates test-year volume for postal cards of  
23 428,618,000 (USPS-T-1, WP-E, page 1) at current rates. This  
24 volume would yield \$85,723,600 in revenue. The Postal Service  
25 proposal assumes a very small decline in postal card volume in

1 response to the 10 percent price increase that the proposal  
2 imposes, based on an assumed demand elasticity of only -0.17.  
3 At the proposed new rate, volume is estimated at 421,302,000  
4 (USPS-T-1, WP-D, page 10 and WP-E, page 1), which would yield  
5 revenue of \$92,686,440. Thus there would be a net increase in  
6 revenue of \$6,963,000. Postal Service forecasts of revenue  
7 effects (USPS-T-1, Exhibit A and WP-E, page 2) show a larger  
8 revenue gain of \$8,426,000, which is obtained by merely  
9 multiplying the \$0.02 increase times the forecast volume at  
10 the new rate. This calculation fails to take account of the  
11 loss in postal card revenue (at \$.20 per card) due to the  
12 decline in volume that the \$0.02 rate increase is assumed to  
13 cause, so it overstates the net revenue gain that can be  
14 expected. But even with that extra revenue loss accounted for  
15 (see USPS-T-1, WP-E, page 1, line 4, column 5), the revenue  
16 forecast may be far too optimistic because of the elasticity  
17 assumptions that lie behind the volume forecast.

18 The main difficulty with this Postal Service proposal is  
19 that it ignores the remarkable difference in processing cost  
20 between postal cards and private cards, postal cards costing  
21 at least \$0.08 per piece less to process than private cards  
22 (USPS-T-5C at 10). Witness Patelunas' response to  
23 interrogatory OCA/USPS-T5-11 notes plausible sources of this  
24 cost difference, including greater compatibility of postal  
25 cards with mechanization and automation due in part to their  
26 uniform size and shape. They also may have cleaner addresses,

1 in part because private cards are more apt to be hand  
2 addressed and sent, for example, from vacation spots. It is  
3 unfortunate that costs are not provided, to show the effects  
4 of these possible influences. But it surely is uneconomic to  
5 raise the effective price of the postal card and thereby  
6 discourage the use of a Postal Service offering that costs so  
7 little to process, while at the same time encouraging the use  
8 of a service that costs more to process. And these effects  
9 may be stronger than is currently being assumed.

10 The newly created "stamped card" will be a very close  
11 substitute for private cards. Past elasticity estimates have  
12 not been based on changes in either the postal card or the  
13 private card rate alone, and might have yielded a greater  
14 elasticity estimate had such an estimate been possible. So  
15 the extremely low elasticity of -0.17 that is being assumed  
16 for a change in price of postal cards may be inappropriate.  
17 Consideration should be given to the possibility that more of  
18 the postal card volume will move to the very close—and now  
19 lower priced—substitute, private cards. Should such  
20 migration occur, the financial consequences could be  
21 unfortunate. The reported contribution above attributable  
22 cost (price minus attributable cost) is less than \$0.04 per  
23 private card and roughly three times as great at \$0.12 per  
24 postal card. To shift volume from the much more profitable  
25 postal cards over to private cards in this situation by  
26 raising the price of postal cards will lower the efficiency of

1 the mail stream. Indeed, the proposal may not even yield the  
2 short-term profit contribution that can be calculated from the  
3 proposal's optimistic assumptions about demand elasticities.

4 Thus, despite the apparent similarity with stamped  
5 envelopes as a basis for charging for a card with a stamp  
6 affixed to it, the stamped card proposal would discourage use  
7 of an extremely efficient item in the mail stream. It is not  
8 needed for consistency, since mailing materials are given free  
9 with some other services. And the proposal could encourage  
10 greater use of private cards that are less efficient to  
11 process. The effects of this proposal could be worse than  
12 projected by the Postal Service because these projections make  
13 optimistic assumptions about cross elasticities of demand  
14 between the two categories of card service.

15

#### 16 G. Post Office Boxes and Caller Service

17 The Postal Service proposes price increases for post  
18 office boxes and caller service (a decrease is also proposed  
19 for box service in those few areas where carrier delivery is  
20 not offered, from the nominal \$2 per year fee to provision of  
21 box service at no charge). Difficulties arise in pricing post  
22 office boxes with a single rate structure that must apply all  
23 across the country. Costs can vary among urban areas and  
24 between urban and rural areas. When areas are categorized and  
25 prices are set to reflect average cost differences some of the

1 resulting prices may seem irrational, as when a suburban area  
2 and a rural area are in close proximity and have essentially  
3 the same costs, but have different rates. Proposed price  
4 adjustments are intended to moderate disparities that exist  
5 among delivery areas in the present rate structure. Costs  
6 also are imputed to post office boxes by size and by location,  
7 so rates can be compared with costs and adjusted to reflect  
8 differences. A nonresident fee is also proposed, a charge of  
9 \$36 per year to receive service in a post office box outside  
10 the 5-digit ZIP Code area where the customer either resides or  
11 has a business address.

12 The delivery areas that are now identified are: I-A, post  
13 offices in high cost areas in New York City; I-B, post offices  
14 in other parts of New York and in eight other large cities; I-  
15 C, other city post offices; II, mainly rural post offices that  
16 provide delivery service; and III, post offices that do not  
17 provide delivery service. These categories are preserved  
18 under the proposal, but rather than being called I-A, I-B, I-  
19 C, II and III, they are to be renamed as delivery areas A, B,  
20 C, D and E. Rates also vary by box size, which obviously  
21 influences costs, and the same five box sizes that are now  
22 offered are still to be offered. The smaller sizes tend to be  
23 used more by individuals and small businesses, while the large  
24 sizes are used more by large organizations such as  
25 corporations.

1        There is a broad general problem in pricing post office  
2 boxes that is not considered explicitly in the proposal. That  
3 problem is that there may be a cost savings in delivery to a  
4 post office box rather than to a business or residence. It is  
5 interesting that two Postal Service post office box proposals,  
6 having a fee for nonresident use of a post office box, or  
7 providing post office boxes free of charge to mail recipients  
8 who do not have delivery service, may both be consistent with  
9 such delivery savings. In the latter case of no delivery to  
10 mail recipients at their own locations, such delivery must be  
11 so costly that it is more economical for the Postal Service to  
12 use post office boxes instead, even when the boxes are given  
13 away free. Such cost savings in delivery to parties that have  
14 post office boxes might extend to other areas, and if so it  
15 can warrant a reduction in the post office box fee to take  
16 account of that effect. If fees are not lowered to reflect  
17 any savings that post office boxes allow in delivery, then  
18 post office box use might be discouraged, with the result that  
19 total delivery costs will be higher.

20        Conceptually, the nonresident fee may also be consistent  
21 with there being a cost saving when mail is delivered to a  
22 post office box, rather than to a residence or place of  
23 business. For when a post office box is provided to a party  
24 living in, or at a business address in, another ZIP Code,  
25 delivery at that other location may be more extensive than  
26 when a box is obtained at the recipient's own post office. So

1 the full potential saving from delivery to a post office box  
2 may not be realized for the nonresident post office box. If  
3 the saving cannot be realized, it may be reasonable to charge  
4 an extra fee for the post office box used by a nonresident.

5 Only minor administrative expenses, which might be traced  
6 to nonresident mailboxes at some locations, have been offered  
7 in an effort to justify the nonresident fee. Thus, in  
8 principle, delivery cost savings—or rather the lack of it—is  
9 the only cost justification for the nonresident fee, and it  
10 has not been presented either. The nonresident fee is thus  
11 unsupportable as presented, with no added cost information for  
12 nonresident post office boxes to justify it. If post office  
13 boxes are properly priced so they cover their costs they  
14 should be provided wherever they are requested by consumers.  
15 If the added delivery cost to nonresident boxes is significant  
16 it should be estimated and offered as support for any proposed  
17 nonresident fee.

18 Despite the failure to consider possible savings in  
19 delivery cost explicitly, the proposed post office box fees  
20 are not extremely high, so the degree of discouragement in  
21 their use may not be great. There are significant differences  
22 by delivery area and box size, however, that do not seem to be  
23 justified by differences in costs. Average cost coverages are  
24 presented below that were calculated from Witness Lion's cost  
25 estimates (USPS-T-4, Table 18) and Witness Needham's revenue

1 information (USPS-T-7, Table 1). These estimates show a  
 2 surprising reliance on

3			
4		Delivery Area	Cost
5		<u>Old</u> <u>New</u>	<u>Coverage</u>
6		I-A            A	148
7		I-B            B	149
8		I-C            C	194
9		II            D	73
10		III           E	0
11			

12 high revenues from delivery area I-C, city areas outside the  
 13 largest cities. There the cost coverage is 194 percent,  
 14 whereas the next highest cost coverage (from large cities)  
 15 averages 149 percent. The post office boxes in rural areas  
 16 are priced below cost. Raising fees sufficiently to avoid  
 17 pricing rural post office boxes below costs would require  
 18 increases greater than 100 percent above current rates,  
 19 because current rates are so low. But the absolute increases  
 20 would be smaller than many other increases in the proposal, so  
 21 they would not be unreasonable. Avoiding prices that are  
 22 below cost would seem to be a compelling goal, and it requires  
 23 higher fees for delivery area II, or proposed area D, post  
 24 office boxes.

25 By box size, the highest average cost coverage is for the  
 26 middle box size, at 153 percent, and coverages decline in  
 27 moving either to smaller boxes, with a coverage of only 129  
 28 percent for the smallest box size, or to larger boxes, with a  
 29 coverage of only 118 percent for the largest box size.

1		
2	Box	Cost
3	<u>Size</u>	<u>Coverage</u>
4	1	129
5	2	143
6	3	153
7	4	137
8	5	118

9  
10 These substantial variations in cost coverages are not  
11 justified by any facts or arguments that are presented. It is  
12 claimed by Witness Needham that fees should be lower for  
13 larger boxes. The main reason given is that users have a  
14 tendency to choose boxes that are too small, which burdens the  
15 Postal Service with costs from overflow mail problems. If  
16 facts are known for such a pattern, it should be included as  
17 an added cost of smaller boxes. Then there would be a basis,  
18 in both principle and amount, for taking the effect into  
19 account in setting prices.

20 The proposed rate structure now encourages the use of the  
21 smallest boxes through lower cost coverages, as well as the  
22 largest boxes, so the goal of encouraging use of larger boxes  
23 is not consistently served by the proposed rates. Another  
24 reason given for having lower rates for large boxes is that  
25 those boxes are used by businesses. They sometimes have

1 alternative opportunities for service from commercial mail  
2 receiving agents (CMRA's) and they may purchase other postal  
3 services if the need to pick up mail gives them reason to be  
4 in the post office. This latter point could be true but it is  
5 speculative and is given no concrete support. The former  
6 point about users of large boxes having alternative  
7 opportunities is not itself persuasive. The large USPS post  
8 office boxes are considerably larger than CMRA boxes. If  
9 revenue obtainable from large boxes is so low, it might be  
10 best for the Postal Service to allow those users to go  
11 elsewhere for service so the large boxes could be converted  
12 into smaller boxes to meet excess demand for them, or the  
13 space might be devoted to other more productive uses.

14 The evidence about alternative services that is presented  
15 is interpreted as showing that users would accept the proposed  
16 increases in post office box rates (Witness Ellard, USPS-T-6).  
17 Specifically, the rates for CMRA boxes are shown to be  
18 substantially higher than USPS boxes (Witness Needham, USPS-T-  
19 7, pages 12-13), and CMRA boxes tend on average to be smaller  
20 (Witness Lion, USPS-T-4, page 23). Indeed, Postal Service  
21 post office box size 4 is roughly twice as large as the  
22 average for the largest CMRA box size, and of course Postal

1 Service box size 5 is even larger. Since the Postal Service  
2 has economies of scope in providing post office box service,  
3 and may even avoid some cost of delivery in doing so, there is  
4 little doubt that alternative box services are more costly.  
5 The Postal Service has market power, in other words, in the  
6 market for post office boxes.

7        Caller service allows recipients of mail to call at the  
8 post office to pick up mail. Slightly different fees exist  
9 now for this service in delivery areas I-A, I-B, and I-C, and  
10 the proposal calls for applying the highest semi-annual fee,  
11 that of \$250 for New York City post offices in area I-A, to  
12 the other delivery areas. The fee will rise 4 percent from  
13 \$240 in delivery area I-B and 11 percent from \$225 in area I-  
14 C. It is also proposed that this fee will apply to delivery  
15 area II, where caller service is now available as a substitute  
16 for a box when boxes are scarce, but where some broader demand  
17 for caller service may develop. This service is currently  
18 offered in post offices in delivery area II for the same price  
19 as a large box, which is currently \$55 per year. For  
20 consumers in this situation in rural delivery areas, the  
21 increase in price for caller service from \$55 per year to \$500  
22 per year will be slightly more than 800 percent. It is

1 difficult to consider this proposal to increase caller service  
2 prices in the absence of information about how much it costs  
3 to provide the service.

4       Thus the proposed post office box rates lack a coherent  
5 rationale. Although implicitly consistent with proposals for  
6 no fee in delivery area III and for the imposition of a  
7 nonresident fee, the idea that delivery into a post office box  
8 costs less than delivery to a remote location is not  
9 explicitly considered. Cost coverages are very high for  
10 cities that are not in the largest categories, and they are  
11 actually negative for rural areas. Cost coverages are highest  
12 for the middle size post office box, low for the smallest size  
13 box, and exceptionally low for the largest size box that is  
14 used mainly by larger businesses.

15       It is noted that proper pricing will motivate more  
16 efficient decisions by the Postal Service about space  
17 allocation to post office boxes (Witness Lyons, USPS-T-1, pages  
18 18-19). But there is no evidence the proposed rates will  
19 serve that end. Distortions across delivery areas make box  
20 revenues actually lower than costs in some areas and well  
21 above costs in other areas, so allocation by area will be  
22 distorted. And some box sizes are much more profitable than

- 1 others, so allocation of space to boxes by size within post
- 2 offices will not be properly motivated either.

OCA-101

Docket No. MC96-3

CURRICULUM  
VITAE OF  
ROGER SHERMAN

## ROGER SHERMAN

Addresses: Department of Economics 500 Court Square, #807  
 University of Virginia Charlottesville, VA 22902  
 Charlottesville, VA 22901 [(804) 293-6910]  
 [(804) 924-6746]

Education: Ph.D., Carnegie-Mellon University, Economics (1966)  
 M.S., Carnegie-Mellon University, Economics (1965)  
 M.B.A., Harvard University, Finance (1959)  
 B.S., Grove City College, Mathematics (1952)

## Present

Position: Brown-Forman Professor of Economics, University of Virginia

## Other

Experience: Associate Professor, University of Virginia (1969-71)  
 Assistant Professor, University of Virginia (1965-68)  
 Chairman, Department of Economics, University of Virginia  
 (1982-1990)  
 Assistant Chairman of Economics, University of Virginia  
 (1966-68)  
 Director of Graduate Studies in Economics, University of  
 Virginia (1974-78)  
 Director of Undergraduates Studies in Economics, University of  
 Virginia (1991-93)  
 Director of Distinguished Majors Program in Economics (1992- )  
 Editorial Board, Applied Economics (1969-73)  
 Associate Editor, Applied Economics (1971-73)  
 Editorial Board, Journal of Regulatory Economics (1988- )  
 Editorial Board, Industrial Organization Review (1987- )  
 Editorial Board, Southern Economic Journal (1977-80)  
 Editorial Board, Journal of Economics and Business (1974- )  
 First Vice President, Southern Economic Association (1991-92)  
 Executive Committee, Southern Economic Association (1980-82)  
 Visiting Professor of Economics, Louis Pasteur University  
 (1985, 1991)  
 Visiting Professor of Economics, University of Adelaide (1982)  
 Manager of Manufacturing Control (1960-62), Manager of  
 Manufacturing Standards (1959-60), Information Records  
 Division of IBM Corporation  
 Naval Officer, U.S. Navy (1952-56)

Fellowships: Visiting Fellow in Economics, University of Bristol (1968-69)  
 Fulbright Lecturer/Consultant at Autonomous University of  
 Madrid (1972)  
 Research Fellow, Science Center Berlin (1975, 1979, 1980)  
 Sesquicentennial Associate, University of Virginia Center  
 for Advanced Study (1975-76, 1980-81)  
 Visiting Scholar, Rockefeller Foundation Study and Conference  
 Center, Bellagio, Italy (1985)

Visiting Scholar, Oxford Institute of Economics and Statistics  
(1987)

#### UNIVERSITY OF VIRGINIA COMMITTEES:

Department of Economics Financial Aid Committee (Chairman) (1973-74, 1978-79)  
 Department of Economics Graduate Committee (Chairman) (1974-78)  
 Department of Economics Self Study (Chairman) (1974)  
 University Faculty Self Study (1974)  
 University Center for Advanced Studies Grants Committee (1975-78)  
 University Summer Grants Committee (1971-74, 1981-87) (Chairman 1973-74)  
 University Small Grants Committee (1971-74, 1981-87) (Chairman 1973-74)  
 University Research Policy Council (1972-83)  
 Graduate Faculty of Arts and Sciences Program Committee (1976-81)  
 Faculty of Arts and Sciences Academic Advisory Committee (1977-79)  
 Faculty of Arts and Sciences Promotion and Tenure Committee (1977-79; 1993-94)  
 Committee on the Role of Research in the University (Chairman) (1977-78)  
 Danforth Foundation Selection Committee (1978-80)

College of Arts and Sciences Dean 's Advisory Committee (1978-80)  
 Executive Director, Thomas Jefferson Center (1979-82)  
 Director, Thomas Jefferson Center (1982-84)  
 Presidential Fellowship Selection Committee (1979-80)  
 Copyright Policy Review Committee (Chairman) (1980-81)  
 Faculty of Arts and Sciences Nominating Committee (1988-90)  
 Faculty of Arts and Sciences Steering Committee (1988-90)  
 Faculty Senate (1989-96)  
 Faculty Senate Committee on Faculty Relations (1989-93)  
 Faculty Senate Committee on Program Planning (1994-96)  
 Director of Program for New Arts and Sciences Chairs (1991, 1992)  
 Faculty of Arts and Sciences Ad Hoc Committee on Chaired Professorships  
 (Chair) (1992-93)  
 Faculty of Arts and Sciences Budget Committee (1992-93)

#### CONSULTING/ADVISING:

Civil Service Commission (1967, 1968)  
 Council of Economic Advisors (1974)  
 Postal Rate Commission (1975, 1994)  
 Virginia State Corporation Commission (1975, 1977)  
 Electricity Costs Commission of Virginia (1975)  
 Civil Aeronautics Board (1977, 1978)  
 Virginia Attorney General's Energy Advisory Council (1978-80)  
 Federal Trade Commission (1981-84)  
 U.S. Postal Service (1982-84)  
 McGuffey Arts Center Board Member (1986-92)  
 Charlottesville Gas Advisory Board Member (1992- )
